ComUnity Announces Free Build Subscriptions in the Azure Marketplace

ComUnity, a leading provider of end-to-end low code rapid digitisation platforms for the private and public sector, announced today new free build and professional services products available in the Microsoft Azure Marketplace.

These flexible options enable customers to get started building digital products on the ComUnity platform without incurring any subscription fees prior to going live. Additionally, customers can purchase professional services directly from Azure for support and implementation of digital transformation initiatives.

Customers only pay for the ComUnity Platform subscription when they go live. This innovative Pay-As-You-Succeed model is the best way to ensure that you optimize ROI on your digital transformation initiatives.

Our products in the Azure Marketplace include the following options to get started:

- **Free Build:** In this option, customers can acquire a free license to build digital services on the ComUnity Platform. You only pay when you go live with your applications and start acquiring users.
- **Build Plus:** In the event customers need access to ComUnity's platform engineers, product managers, and consultants to assist with support and implementation, you can purchase the number of hours that are required on a monthly basis.
- **ComUnity Subscription Packs:** Customers can load unlimited digital workload or products and our packages start at 2000 Profiled Users. Packages include 2000, 5000, 10,000, 100,000, and unlimited users.
